---

## WHAT IS THE MARKET POTENTIAL?

The services market volume amounts to trillions of dollars per year.

- Over 5 billion people want to increase their income every day.
- Independent specialists from all corners of the globe earn over **\$1 trillion a year**. In the US, for instance, the share of freelancers reaches **34% of the total workforce**.
- In addition, the capacity of the personal services market exceeds **\$500 billion** per year.
- The share of services in the consumer budget is, on average, equal to 31% in the USA, 37% in England, and 41% in Sweden.

## WHAT IS THE MARKET OPPORTUNITY?

In the future, new technological capabilities will drive the expansion of the services market horizons.

At present, over half of consumer demand for services remains unsatisfied.

Limited capabilities of consumers is the primary reason why the needs remain unmet. Anticipating the difficulties associated with obtaining of services, the consumers refuse to obtain them. The restrictions faced by consumers are related to time, territory, finances, administrative units, payments, functions, and specialisation. The currently available solutions typically have these shortcomings in one form or another.
